Positioning For:

SUITABILITY RATINGS

KEY ENVIRONMENTS

Goss's Prone Fields Suitable

SUITABILITY

High Residue Suitable
 Late Harvest Suitable
 Corn After Corn Suitable

SOILS

Early Planting/Cold Soils Suitable
 Coarse Textured Soils Highly Suitable
 Drought Prone Soils Highly Suitable
 Poorly Drained Soils Suitable
 High pH Soils Suitable

MANAGEMENT COMMENTS

- Excellent yield stability under dryland conditions to more favorable environments.
- Very good grain quality and test weight.
- Responds well to higher seeding rates.
- Favorable option for fields with known Goss's wilt pressure.
- Consider fungicide applications in fields with a known history of severe Grey Leaf Spot pressure.

REFUGE

Integrated Refuge

- 95% (YGCB, HX1, LL, RR2)
- 5% (LL, RR2)

CHARACTERISTIC SCORES

Drought Tol.	8
Stalk Strength	7
Root Strength	5
Stress Emergence	5
Staygreen	6
Mid-Season Brittle Stalk	7
Plant Ht.	6
Ear Ht.	5
Test Wt.	7
Grain Drydown	5

DISEASE SCORES

Gray Leaf Spot	4
Goss's Wilt	6
Anthr. Stalk Rot	4
Head Smut	1

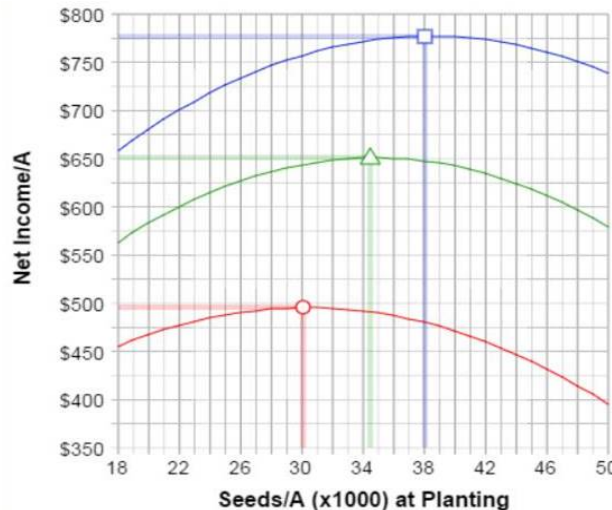

TRAIT SCORE RATINGS: 9 = Excellent; 1 = Poor; Blank = Insufficient Data.

MARKET SEGMENTS

YFC: Yellow food corn
 HAE: High Available Energy (Monogastric Feed)
 HTF: High Total Fermentables (Dry-Grind Ethanol)

ESTIMATED SEEDING RATE

Contact your Pioneer sales professional for additional information. Planting rate estimates provided for informational purposes only. Information here is provided for a hybrid family and not individual products. Product performance is variable and depends on many factors, such as soil type, management practices, environmental stress, disease, and pest pressure. Individual results may vary. Planting rate and seeding costs have been increased by 5% to account for early season stand loss.
