

Since 1937, our family and family of employees have stayed true to our heritage. One built on the hard work, faith, and innovation of our family of employees and dealers. We lead with our hearts and are dedicated to always doing the right thing. That's why we continue to back a quality line of products with a quality way of treating customers. At our very core, we love what we do, and we're passionate about helping farmers succeed. No matter the season or the challenges you face, Beck's will be by your side.

We look forward to providing you with the best in seed quality, field performance, and personalized service in 2022.

Sonny Beck, CEO

Scott Beck, President

**DOING WHAT'S
RIGHT FOR FARMERS.
AT OUR CORE, THAT'S
WHO WE ARE.
FARMERS AT HEART.**

GENETIC DIVERSITY

At Beck's, we work hard to bring our customers the industry's most diverse product lineup. Not only do we have our own proprietary corn breeding program, we also work with elite technology and germplasm suppliers to access world-class genetics. While most companies only have access to one or two germplasm pools, we have the most access of any company worldwide.

Our philosophy has always been one of choice, and we're proud to offer farmers the freedom to choose the right hybrid or variety for their farm, regardless of the trait or source company. For us, it's never been about profits or economies of scale. It's about helping farmers maximize yield on every acre.

**We're dedicated to providing
the best region-specific, high-
performing products to optimize
every acre, regardless of the trait
or source company.**

REGIONAL SELECTION

Regional advantage is all about having the right products that will deliver higher yields in smaller geographies. And while the ideal hybrid would be one that we could sell to customers across our entire geography, we know that products are not a "one size fits all" recommendation.

We're committed to providing farmers with the highest performing hybrids and varieties that are adapted to much smaller areas. Each year, our product team identifies and launches products specific to each region's environment, historical weather patterns, disease pressure, and soil types. This ensures that we are recommending the ideal product placement for every acre.

RESEARCH

We invest heavily in our robust corn breeding and research program to offer customers quality, high-yielding products. With one of the most extensive independent seed testing and breeding programs in the Corn Belt, our team of corn breeders evaluates and utilizes the best genetics and latest technologies. Trait introgressions, the dihaploid process, and a state-of-art molecular marker lab allow us to bring farmers high-performing products faster than ever before. And with a “best product wins” mentality, we can continue to focus on what’s important to farmers: germination, emergence, standability, plant health, and yield.

FARMER-FOCUSED RESEARCH

Innovation has always been at the heart of farming, and that’s why we developed Beck’s Practical Farm Research (PFR)[®] program.

Since 1964, we have continued to provide the most comprehensive, innovative, and practical agronomic research in the industry to help farmers with decisions that can improve profitability.

By evaluating hundreds of new management practices and inputs, we deliver unbiased agronomic data to help farmers make better decisions for their operations.

There’s no other credible source of unique agronomic information readily available to farmers today. Not only does PFR help them determine what will increase yields on their operations, but more importantly, what will increase their return on investment (ROI).

FREE REPLANT

We’ve always believed in standing behind our products, and still to this day, no one else in the industry continues to provide that level of confidence or peace of mind. By providing value-added programs like a 100% Free Replant Policy, we offer farmers the confidence they need to reach their greatest potential. If there’s a need to replant a stand of Beck’s corn, soybeans, wheat, or elite alfalfa, as determined by a Beck’s representative, we’ll furnish the seed and royalties free of charge.*

*Beck’s will attempt to provide the same product for replant that the customer originally planted. Substitutions of some products may be necessary. Replant must be planted in the same crop year as originally planted. If elite alfalfa needs replanting, Beck’s will provide replant seed one time during stand establishment.

BECK'S LOCATIONS

With an emphasis on local facilities, we work hard to deliver products faster, provide better customer support, and offer additional agronomic services, regardless of where you are located in Beck's marketing area.

At Beck's, our dealers and employees are the heartbeat of our company. They are the ones that truly drive our success, and we are proud to call our network of 1,600+ dedicated employees and dealers family.

To find your local Beck's representative, call 800.937.2325.

We believe in choices, and we work hard to provide farmers with the best products for every field and operation. Our intensive testing program and field observations in corn capture regional differences, allowing us to recommend the best products for your unique geography. We have the elite soybean platforms for ultimate flexibility and weed control in the fight against tough-to-control resistant weeds. We offer wheat and small seeds like alfalfa, forages, and cover crops to create additional opportunities for farmers such as alternative revenue sources, improved soil health, organic matter, and livestock feed. Beck's is also putting an increased focus on evaluating and highlighting high-performing corn silage products, plus providing a unique line of inoculant products for enhancing fermentation of haylage or corn silage. You can count on Beck's to provide complete lineups of products to match your goals.

ESCALATE® CORN SEED TREATMENT

Each farm and every year is unique, and that’s why Beck’s seed enhancements team is constantly monitoring and testing new opportunities to bring the most beneficial and value added products to customers.

Beck’s Escalate® with Nemasect® is an elite seed treatment comprised of 12 active ingredients that controls at least 16 different diseases, insects, and nematodes. That’s more than any competitor’s standard seed treatment package. New in 2021, we added a sixth fungicide for improved emergence and vigor under cold conditions.

ESCALATE® | NEMASECT®

12
MOAs

6 Fungicides
2 Insecticides
2 Nematicides
1 Bio-Stimulant
1 Biological

This seed treatment comes standard on every bag of Beck’s seed corn. It includes Poncho® Votivo® 2.0 Seed Treatment System, a fluency agent and polymer for improved flowability and plantability, and Nemasect®, a broad spectrum nematicide with activity on many soil-dwelling insects.

BENEFITS OF NEMASECT®

With a 90% win rate versus standard treatment, Nemasect® adds a second mode of action to Escalate® to kill insects and nematodes, as well as protect and improve yield.**

BENEFITS OF PONCHO®/VOTIVO® 2.0

Poncho® Votivo® 2.0 Seed Treatment System provides early-season protection from above- and below-ground insects and corn plant pathogenic nematodes. Its bacterial component, TWO.O, enhances the microbial activity around the plant roots for improved nutrient uptake for even greater yield potential.***

Included (No Extra Charge)

THE BASE CORN PACKAGE PROVIDES
ACTIVITY AGAINST:

DISEASES
DAMPING OFF
SEEDLING BLIGHTS
PYTHIUM
SURFACE & INTERNAL PATHOGENS
FUSARIUM
SEED DECAY

INSECTS
CORN ROOTWORM*
WHITE GRUBS
WIREWORMS
SEEDCORN MAGGOTS
BLACK CUTWORM

NEMATODES
LESION NEMATODE
STUNT NEMATODE
DAGGER NEMATODE
STUBBY ROOT NEMATODE
NEEDLE NEMATODE

* Corn rootworm protection provided by Escalate seed treatment with Nemasect is similar to the activity on corn rootworm as the 1250 rate of Poncho.

** Nemasect delivered a median 9.8 Bu./A. yield protection advantage in corn in a 4-year trial (2016-2019) with 107 trial sites, and a 90% win rate over F/I control.

*** In replicated field trials from 2014-2019, Poncho/VOTIVO 2.0 averaged 3 - 6 Bu./A. yield advantage over standard F/I base.

ESCALATE® SOYBEAN SEED TREATMENTS

Your success starts with the seed you plant, and no matter what, your soybeans will be protected by Beck's base seed treatment at no additional charge. Escalate® | Nemasect® | SDS+ works to suppress 14 types of diseases and insects. Plus, it has a polymer for improved flowability and plantability, making it one of the most robust seed treatment packages available. In addition to the base treatment, Beck's offers an optional upgrade treatment package that includes ILEVO® + TWO.O®, so you can select the level of protection that's right for your operation.

ESCALATE® | NEMASECT® | SDS+

Included
(No Extra Charge)

7 MOAs

3 Fungicides
1 Nematicide
1 Bio-Stimulant
1 Bio-Fungicide
1 Bio-Insecticide

BASE TREATMENT: This seed treatment package is comprised of seven active ingredients with activity on nematodes, SDS, and white mold, three of the biggest yield-robbers in soybeans. Nemasect® alone has a 3.0 Bu./A. advantage in moderate to high soybean cyst nematode (SCN) infections in 216 trials over four years.*

ESCALATE® | NEMASECT® | SDS+ | ILEVO® + TWO.O®

+ \$9.95/Unit

10 MOAs

4 Fungicides
2 Nematicides
1 Biological
1 Bio-Stimulant
1 Bio-Fungicide
1 Bio-Insecticide

UPGRADE OPTION: This upgraded package combines the benefits of our base soybean treatment, but now with the addition of ILEVO® and TWO.O®. The ILEVO component provides additional protection against Sudden Death Syndrome (SDS) for a total of three modes of action against SDS, as well as two modes of action on nematodes, the number one yield robber in soybeans. The biological, TWO.O, increases microbial activity in the root zone and improves water utilization and nutrient uptake. ILEVO brings an additional 4.6 Bu./A. over industry standard fungicide and insecticide treatments.**

THE BASE AND UPGRADE SOYBEAN PACKAGES PROVIDE ACTIVITY AGAINST:

DISEASES
WHITE MOLD
SUDDEN DEATH SYNDROME (SDS)
SEEDLING BLIGHT
FUSARIUM
PHOMOPSIS (POD AND STEM BLIGHT)
PHYTOPHTHORA ROOT ROT
PYTHIUM
RHIZOCTONIA
SURFACE & INTERNAL PATHOGENS

INSECTS
SEEDCORN MAGGOTS
WIREWORMS
GRUBS

NEMATODES
SOYBEAN CYST NEMATODE
ROOT-KNOT NEMATODE
RENIFORM NEMATODE
ADDITIONAL NEMATODES

*Test results from four-year field trials at 216 trial sites (2016 – 2019). **364 comparisons in varying levels of SDS pressure

X = Control **S** = Suppression / Intermediate Protection (Partial protection depending on the development stage of the plant when insects infest the plant.) **Corn Rootworm** = Western Corn Rootworm, Northern Corn Rootworm, Mexican Corn Rootworm **See Page 62** for all trademark and legal statements. Corn Technologies Chart revised June 2021.

Various factors, including pest pressure, reduced susceptibility, and insect resistance in some pest populations may affect efficacy of certain corn technology products in some regions. To help extend durability of these technologies, we recommend you implement Integrated Pest Management (IPM) practices such as crop rotation, cultural and biological control tactics (including rotating sources of Bt-protected corn traits), pest scouting, and appropriate use of pest thresholds when employing management practices such as insecticide application. You must also plant the required refuge when using these technologies. Please contact your sales professional or consult with your local university extension for more information regarding insect resistance management guidelines, best management practices and to understand whether there has been a shift in susceptibility or insect resistance with certain pests documented in your area.

* Western bean cutworm has been removed from the product use statement for several corn products that contain Herculex® I (Cry1F) but lack another mode of action for western bean cutworm due to a wide-spread decrease in susceptibility indicating the possibility of field-evolved resistance to Cry1F in most geographies.

** The non-RIB version of SmartStax® may still be planted in the cotton-growing area of the U.S. provided that growers plant the additional 20% non-Bt structured refuge.

All scores of integrated refuge products are based upon the major component.

SOYBEAN TECHNOLOGIES

XTENDFLEX®: Dicamba, glyphosate, and glufosinate tolerance provided by the XtendFlex® platform gives you control over 337 weeds¹ and up to 14 days of soil activity on certain small-seeded broad leaf weeds from XtendiMax® herbicide with VaporGrip® Technology, a restricted use pesticide². **Built on Performance:** XtendFlex® soybeans are built on the proven performance of the high-yielding Roundup Ready 2 Xtend® soybeans for outstanding agronomic performance.

- New 2,4-D Choline
- Glyphosate
- Glufosinate

Following burndown, Enlist Duo® and Enlist One® with Colex-D® technology are the only herbicides containing 2,4-D that are labeled for preemergence and postemergence use with Enlist E3™ soybeans.

- Convenient blend of 2,4-D choline and glyphosate
- Two modes of action to deliver control and help prevent resistance in your fields

- Straight-goods 2,4-D choline with additional tank-mix flexibility
- Ability to tank-mix with Liberty® herbicide and other qualified herbicides, customizing the ratio of herbicides to match each farm's needs

ENLIST E3®: Enlist E3® soybeans provide tolerance to 2,4-D choline (Enlist Duo® or Enlist One®), glyphosate, and glufosinate. **An Easy and Versatile Fit:** A wide application window (no later than R2 or full flower) and the versatility of Enlist herbicides make them easy to incorporate into your weed management plan. Enlist Duo® and Enlist One® herbicides can be used over the top of Enlist E3® soybeans and they have no plant-back restrictions after using an Enlist™ herbicide for burndown.

On-Target Applications

- 90% less drift than traditional 2,4-D
- 96% less volatile than 2,4-D ester

ROUNDUP READY 2 XTEND®: Roundup Ready 2 Xtend® soybeans provide tolerance to glyphosate and dicamba. **Broad-Spectrum Weed Control:** Control approximately 311 weed species¹. With XtendiMax® herbicide with VaporGrip® Technology, a restricted use pesticide, you can get up to 14 days of soil activity on certain small-seeded broadleaf weeds².

LIBERTYLINK® GT27®: LibertyLink® GT27® soybeans allow both Liberty® and glyphosate use over the top. In labeled geographies, Alite™ 27 herbicide adds another effective pre-emergent residual mode of action. It is the first HPPD herbicide available for soybeans.* **Peace of Mind:** Liberty and glyphosate offer fewer application restrictions on buffers, rain, wind, time of day, and date for easier management. Programs for the system are based on non-volatile chemistries and low drift risk to minimize off-target concerns.

¹ Based on approved EPA herbicide labels for the herbicides recommended for use in each system as of 10/28/2020.

² Results may vary, depending on rainfall and soil type. Always use dicamba with residual herbicides in pre-emergence and post-emergence applications that have different, effective sites of action, along with other Diversified Weed Management Practices.

*LibertyLink® GT27™ soybeans offer triple stack tolerance to Liberty, glyphosate, and, in select counties specified on the label, the first HPPD based herbicide for soybeans — Alite™ 27. Other HPPD herbicides not labeled for use with LibertyLink GT27 or isoxaflutole-resistant soybeans may cause significant crop injury. Alite 27 herbicide is only available for use in labeled counties.

Always read and follow label instructions. Check with your state for additional restrictions.

NAMING STANDARDS

First two digits + 50 equals hybrid relative maturity.
 Ex. 50 + 50 = 100 RM

5077V2P

End characters (up to five) indicate trait technology, if traited hybrid.

Last two digits indicate genetic similarity between hybrids.
 Ex. 5077 and 5277

Naming standard does not apply to hybrid numbers 5131, 5140, and 6948.

IMPORTANT: Characteristic scores provide key information useful in selecting and managing products in your area. Information and ratings are based on comparisons with other products sold by Beck's Hybrids. Information and scores are assigned by Beck's Hybrids and are based on period-of-years testing through 2020 harvest and were the latest available at time of printing. Some scores may change after 2021 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision.

Agrisure®, Agrisure Artesian®, Artesian™, Agrisure Duracade®, Agrisure Viptera®, and E-Z Refuge® are trademarks of a Syngenta Group Company. More information about Agrisure Duracade® is available at <http://www.biotradestatus.com/>. IMPORTANT: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

100% FREE REPLANT POLICY

If there is a need to replant a field of Beck's corn, soybeans, wheat, or elite alfalfa, as determined by a Beck's representative, Beck's will furnish the seed and royalties for FREE*. Beck's will attempt to provide the same product for replant that the customer originally planted. Substitutions of some products may be necessary. Replant must be planted in the same crop year as originally planted. If elite alfalfa needs replanting, Beck's will provide replant seed one time during stand establishment.

*Does not include Great Harvest Organics branded soybean or wheat, cover crops, forages, or milo.

NAMING STANDARDS

First two digits + 50 equals hybrid relative maturity.
Ex. 57 + 50 = 107 RM

5794 V2P

End characters (up to five) indicate trait technology, if traited hybrid.

Last two digits indicate genetic similarity between hybrids.
Ex. 5794 and 5994

Naming standard does not apply to hybrid numbers
5131, 5140, and 6948.

100% FREE REPLANT POLICY

If there is a need to replant a field of Beck's corn, soybeans, wheat, or elite alfalfa, as determined by a Beck's representative, Beck's will furnish the seed and royalties for FREE*. Beck's will attempt to provide the same product for replant that the customer originally planted. Substitutions of some products may be necessary. Replant must be planted in the same crop year as originally planted. If elite alfalfa needs replanting, Beck's will provide replant seed one time during stand establishment.

*Does not include Great Harvest Organics branded soybean or wheat, cover crops, forages, or milo.

NAMING STANDARDS

First digit indicates RM group and second number indicates maturity within group.

3 5 5 5 X F

Ending characters, if present, indicate trait technology and Beck's soybean series.

Last digit(s) is a placeholder allowing more naming options across technologies.

100% FREE REPLANT POLICY

If there is a need to replant a field of Beck's corn, soybeans, wheat, or elite alfalfa, as determined by a Beck's representative, Beck's will furnish the seed and royalties for FREE*. Beck's will attempt to provide the same product for replant that the customer originally planted. Substitutions of some products may be necessary. Replant must be planted in the same crop year as originally planted. If elite alfalfa needs replanting, Beck's will provide replant seed one time during stand establishment.

*Does not include Great Harvest Organics branded soybean or wheat, cover crops, forages, or milo.

Resistance to Races:

A = 1-2, 10-13, 15-19

C = 1-3, 6-11, 13, 15, 17, 21, 23, 24, 28, 44

K = 1-11, 13-15, 17, 18, 21, 22, 24, 43, 44

3a = 1-4, 10, 12, 14-16, 18-21, 25, 28, 33-35

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

Seeds containing the LibertyLink® trait may be protected under one or more U.S. patents and may be planted only to produce one (1) commercial crop in a single season, and only after signing a BASF Grower Technology Agreement. It is illegal to save seeds containing the LibertyLink trait for use as planting seed or for transfer to others for use as planting seed. LibertyLink® GT27® soybeans offer triple stack tolerance to Liberty, glyphosate, and, in select counties specified on the label, the first HPPD based herbicide for soybeans—Alite® 27. Other HPPD herbicides not labeled for use with LibertyLink GT27 or isoxaflutole-resistant soybeans may cause significant crop injury. Alite 27 herbicide is only available for use in labeled counties. Always read and follow label directions. Alite 27 is a restricted use herbicide. Alite, Liberty, and LibertyLink are registered trademarks of BASF. GT27 is a registered trademark of M.S. Technologies, L.L.C. MS Technologies is a trademark of M.S. Technologies, L.L.C. ©2020 BASF Corporation / M.S. Technologies, L.L.C. All Rights Reserved. APN 20-INT-0014

Seeds containing the Enlist traits are protected under numerous US patents. Seeds containing patented traits can only be used to plant a single commercial crop and cannot be saved or replanted. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements detailed therein (www.corteva.us/Resources/trait-stewardship.html). To plant Enlist you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed. Always read and follow herbicide label directions prior to use. Enlist® products contain the Enlist trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist® crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are not authorized for use in conjunction with Enlist products.

100% FREE REPLANT POLICY

If there is a need to replant a field of Beck's corn, soybeans, wheat, or elite alfalfa, as determined by a Beck's representative, Beck's will furnish the seed and royalties for FREE*. Beck's will attempt to provide the same product for replant that the customer originally planted. Substitutions of some products may be necessary. Replant must be planted in the same crop year as originally planted. If elite alfalfa needs replanting, Beck's will provide replant seed one time during stand establishment.

*Does not include Great Harvest Organics branded soybean or wheat, cover crops, forages, or milo.

WHEAT VARIETIES

SOFT RED WINTER

Planting wheat provides the flexibility to have multiple income sources, allows for crop rotation, and provides a healthy environment for microorganisms in the soil. We strive to provide farmers with the absolute best varieties that are consistently high yielding and have exceptional plant agronomic characteristics to deliver more money in their pockets at the end of the year.

TRADITIONAL*	VARIETY	MATURITY	PRODUCT DESCRIPTION	IRR	HIG	ME	LO	PO DR	TE	ST	PL	AW	TIL	WI	HE	DO	ST

BECK'S CORN SILAGE

RM 90 - 115

In many areas of the Midwest, corn silage is the focus. With that in mind, Beck's is putting an increased focus on evaluating corn silage products that will perform on your farm in 2022. We excel at providing you with the individual hybrid characteristics that drive tonnage while also understanding that hybrids differ in their feed quality components. Knowing these unique agronomic and quality differences is vital towards our goal of helping you maximize overall performance and profitability on your livestock operation.

BIO-XTRA™

CORN SILAGE AND HAYLAGE INOCULANT

There are many naturally-occurring bacteria in forage/silage that will allow it to undergo the fermentation process. Each bacterial species has a unique purpose and growing conditions under which they thrive, like particle size and moisture content. If a certain bacteria induces fermentation at 64% moisture content and environmental conditions are above or below that level, the bacteria will still work, but at a slower rate. This can put your feed product at greater risk of spoilage. By adding a silage inoculant, you are ensuring a higher colony forming unit (cfu) of many different species of bacteria. This helps reduce the impact of environmental risks that farmers face every year during chopping season, and ultimately produces a high quality feed source for livestock. Beck's offers a lineup of inoculant products for farmers interested in enhancing fermentation of haylage or corn silage. The BIO-XTRA™ products provide three inoculant options plus a mold inhibitor.

BECK'S LINE OF BIO-XTRA™ PRODUCTS

BIO-XTRA™ I is an economical option containing four different species of homofermenting bacteria. These bacteria produce lactic acid to assist in dropping the pH level. BIO-XTRA I is best utilized when the environmental factors are most favorable and we minimize as much outside risk of spoilage in both corn silage and haylage.

BIO-XTRA™ II contains four different species of homofermenting bacteria that produce lactic acid to assist in dropping the pH level at double the cfus of BIOXTRA I. This improves the speed and efficiency of the fermentation process in both haylage and corn silage. One of the heterofermenting bacteria produces both lactic and acetic acid which aides with back-end aerobic stability.

BIO-XTRA™ + contains five species of homofermenting bacteria that produce lactic acid to assist in dropping the pH level and one heterofermenting bacteria that produces both lactic and acetic acid that aides with back-end aerobic stability. In addition to these bacteria, BIO-XTRA + includes a proprietary strain of *Enterococcus Faecium* that accelerates starch digestibility. This product is best utilized when applied to high moisture corn and, specifically, high starch content feedstuff. BIO-XTRA + offers the best fermentation efficiency when silage chopping conditions or kernel processing are less than ideal.

BIO-XTRA™ LIQUID MOLD INHIBITOR is a combination of food grade preservatives that prevent the growth of molds and wild yeast during, and after, fermentation for increased aerobic stability. This product is designed to partner with any of our BIO-XTRA lineup specifically to improve shelf-life during feed-out. By combining the mold inhibitor and any products from the BIO-XTRA inoculant lineup, we can accomplish both an efficient fermentation and improved shelf-life/aerobic stability. Additionally, you get an improved fermentation efficiency over any *L. buchneri* product and comparable or better aerobic stability in a very economical manner.

All Beck's Milo/Grain Sorghum is treated with Beck's Escalate® yield enhancement system which includes a safener, an insecticide, and two fungicides.

	PRODUCT	DESCRIPTION
SUMMER ANNUALS	BMR Brachytic Dwarf Forage Sorghum	A very leafy plant with more leaf and less stem, this product produces high-quality tonnage and will not lodge.
	BMR Sorghum Sudangrass	A very leafy Sorghum x Sudan plant with increased digestibility, quick regrowth, and excellent yield. It is an early maturing variety which allows for cutting in 40 to 55 days.
	Summer Delight Teff	This fine stem, leafy, warm-season annual grass combines excellent forage quality in a shorter growing season. It can be cut multiple times during hot summer months.

NEW THIS YEAR: ALL SEED PURCHASES QUALIFY TOWARDS COMMITMENT REWARDS

FORAGES AND COVER CROPS

SEEDS AND CUSTOM BLENDS

	PRODUCT	DESCRIPTION
FORAGE SEED	Medium Red Clover	This product is used mainly for hay, pasture, pasture renovation, and soil improvement. Fast growing, it establishes quickly, producing a high-quality forage.
	3 Yr. Medium Red Clover	3-Year Medium Red Clover is an improved, high-yielding variety with excellent persistence and outstanding disease resistance.
	Bull Tall Fescue	An endophyte-free, early maturing, high-yielding variety with a wide adaptation of use. Highly palatable and can be harvested as hay or silage.
	Profit Orchardgrass	Profit is a late maturing, quick-to-establish variety with excellent persistence. It has superior disease and rust resistance, pairs well with alfalfa, and can help extend an aging stand.
	Kootenai Timothy	Kootenai is the superior variety of Timothy. It offers excellent winterhardiness and is very persistent, making it perfect for mixes.
	Feast II Italian Ryegrass	Feast II establishes quickly and works well for pasture or field repair. It offers fast regrowth coupled with excellent feed quality.
FORAGE BLENDS/TURF SEES	Ultimate Hay Blend	45% Beck's LeafGuard II Alfalfa, 32% Gallant Extra Medium Red Clover, 12% Kootenai Timothy, and 11% Orca Orchardgrass. This blend will produce high-quality forage across all environments.
	Premium Hay Blend	65% Fierce Alfalfa, 22% Profit Orchardgrass, 13% Kootenai Timothy. An excellent option for horses
	Pasture Blend	40% Tekapo Orchardgrass (coated), 20% Perseus Festolium, 20% Power Tetraploid Perennial Ryegrass, 10% Kootenai Timothy, and 10% Ginger Kentucky Bluegrass.
	All-Grass Forage Blend	30% Power Perennial Ryegrass, 25% Preval Meadow Fescue, 20% Orca Orchardgrass, 20% Kootenai Timothy, and 5% MacBeth Meadow Bromegrass. Highly palatable varieties for grazing or hay.
	Cattle Grazer Blend	50% Bronson Tall Fescue, 40% STF 43 Tall Fescue, 8.5% Gallant Red Clover, and 1.5% Jumbo II Ladino Clover. Endophyte-free fescues / beef producer favorite.
	Water-Way Blend	45% Bull Tall Fescue, 45% Perennial Ryegrass, and 10% Creeping Red Fescue.
	Playmaker Mix	An 80% blend of five fine bladed elite Tall Fescues, 10% Perennial Ryegrass, and 10% Kentucky Bluegrass. Playmaker has superior drought tolerance.
	Sunny Mix	A mix of 40% Kentucky Bluegrass, 40% Perennial Ryegrass, and 20% Creeping Red Fescue.
COVER CROPS	SoilBuilder Mix	A mix of 60% Oats, 30% Rye, 6% Rapeseed, and 3% Radish. Great ahead of corn or soybeans
	Corn Champion Mix	82% Dixie Crimson Clover, 15% GroundBuilder Radishes, and 3% Appin Turnips. Recommended ahead of corn.
	BeanBuilder Mix	81% Beck's Annual Ryegrass, 16% GroundBuilder Radishes, and 3% Appin Turnips. Recommended ahead of soybeans, but works well ahead of corn.
	Winter Mix	95% cereal rye and 5% Dwarf Essex rapeseed. The cereal rye provides a deep, fibrous root system while the rapeseed helps break up compaction.
	Oat Radish Mix	91% Spring Oats and 9% Beck's GroundBuilder Radishes. This product provides the deep rooting potential of radishes and the fibrous root system of oats.
	GroundBuilder Radishes	This product produces large root masses that can shatter compaction and scavenge nitrogen and nutrients deep within the soil.
	Annual Ryegrass	With a dense, fibrous root system, this product is effective in improving soil structure. It's recommended to terminate when it is actively growing.
	Cereal/Winter Rye	This product offers fast germination with a deep, fibrous root system to prevent soil erosion. It is an excellent post-harvest option.
	Oats	A great cover crop option as a stand alone product or in mixes. Quick establishment and a fibrous root system holds soil together.
	Dixie Crimson Clover	This legume fixes nitrogen and stimulates soil health. It works well in mixes.
	Dwarf Essex Rapeseed	Rapeseed is a very versatile product that works well when added to a mix.

■ = New

CUSTOM COVER CROP MIXES AVAILABLE: Create a cover crop mix utilizing multiple cover crop species to fit your operation's specific needs. Custom mixes can be blended at any desired rate. Minimum quantities required and no returns. **For custom mixes or other cover crops, contact Ryan Moore, Small Seed Product Manager, at 317.565.4059 or RMoore@BecksHybrids.com.**

Since 1937, we have remained an independent, family-owned company dedicated to helping our customers succeed. Through their loyal support, we have grown to become the largest family-owned retail seed company and the third-largest seed brand in the United States. And while our competitors focus on delivering profits to Wall Street, we're focused on the profitability of farmers, which is why we choose to pass our profits on to them.

We sincerely appreciate the loyalty our customers continue to show us, and we know we wouldn't be where we are today without them. The programs we offer are simply our way of saying thank you for entrusting us with your seed purchase decisions.

PRECISION FARMING

For every farm and every field, there are numerous decisions that must be made each year. To help you make those decisions with confidence, Beck's created FARMserver®, a web-based suite of tools designed to assist farmers in implementing precision farming strategies on their operation. With easy-to-use and secure tools, farmers can precisely monitor cropping variables, collect and analyze data concerning those variables, and then use the resulting information to increase productivity on the farm.

FARMserver®

FIELD CROP GROWTH MODEL

FARMserver's new Field Crop Growth Model can help improve your profit potential by providing actionable, in-season notifications that offer agronomic and PFR Proven™ insights specific to each of your fields.

The PFR and agronomy alerts streamline standout agronomic products and practices that consistently perform and provide cultural, chemical, mechanical, and biological advice pre-season to post-harvest to help you protect yield and increase ROI.

Want to know the best part? Backed by a dedicated support team to ensure success, FARMserver subscriptions are free to all Beck's corn and soybean customers and is compatible with all makes and models of monitors.

BENEFITS AND FEATURES OF FARMSERVER®

- Improve your profit potential with actionable, in-season agronomic notifications.
- Utilize growth model recommendations to implement various crop management diagnostics to set the stage for a healthy harvest.
- Create your management zones with FARMserver's easy, step-by-step process.
- View your ROI on a farm, field, and whole operation level with the ROI Calculator Tool.
- Access FARMserver anywhere through the mobile app.
- Reference events like planting, applications, or even rainfall in your fields from any season or year with field-focused record keeping.
- Evaluate where improvements are needed in your field with comprehensive reports.
- Easily match seed to your fields, taking the guesswork out of product selection.
- Take advantage of integrations with MyJohnDeere, FieldView™, Soil Test Pro, Sentera, and others.

UNLOCKING THE BENEFITS OF YOUR DATA BEGINS WITH INTEGRATING INTO FARMSERVER FOR ANALYSIS.

To provide you with all the precision farming tools you need in one place, we continue to partner with a variety of companies that bring additional resources to FARMserver.

When you utilize FARMserver, you get a team of dedicated Beck's employees who are available to answer all of your FARMserver questions. Through the good days and the bad, farming is where our heart is. At the end of the day, you're working with people who care, who love what they do, and who are farmers at heart.

PRESIDENT'S CLUB

We are humbled to know that so many farmers continue to trust us to deliver the products and tools they need for a successful farming season. We would not be where we are today if it wasn't for loyal customers like you.

To show our sincere appreciation for your commitment to plant 100% Beck's corn and/or soybeans in 2022, we invite you to become a member of Beck's President's Club program.

President's Club benefits are available to Beck's seed customers who purchase and agree to the club guidelines between August 1, 2021, through July 31, 2022. To be eligible, customers must sign a 100% Loyal Customer Affidavit. Corn club members must plant 100% of their corn acres with Beck's products such as Beck's, XL®, Phoenix®, or Great Harvest Organics.

CORN CLUB BENEFITS

- Club members will receive a \$6 per unit instant rebate off their invoice for each seed corn unit purchased for planting in 2022.
- All Club members who attend one of Beck's annual Field Shows will receive a gift.
- Experience exclusive access to the VIP room at Beck's Field Shows and Becknology™ Days.
- All members can qualify for a free Grand Cayman Reward Trip if they purchase \$200,000 of corn and soybean seed.
- Receive additional gifts throughout the year.

SOYBEAN CLUB BENEFITS

- Club members will receive a \$1 per unit instant rebate off their invoice for each seed corn unit purchased for planting in 2022.
- All Club members who attend one of Beck's annual Field Shows will receive a gift.
- Experience exclusive access to the VIP room at Beck's Field Shows and Becknology™ Days.
- All members can qualify for a free Grand Cayman Reward Trip if they purchase \$200,000 of corn and soybean seed.

TWO TICKETS TO PARADISE

We understand how the daily grind of the growing season can take a toll on you and your family, and there is no one more deserving of some rest and relaxation after harvest. We would love for you to join us and other Beck's customers on an unforgettable trip to Grand Cayman or the Dominican Republic.

THE LONDON HOUSE

Grand Cayman, Cayman Islands

Located on the secluded end of world-famous Seven Mile Beach in the Cayman Islands, the London House is your perfect getaway where you will experience the very pinnacle of serenity and bliss. Capturing the beauty and essence of the perfect island retreat, each luxury condo at the London House welcomes guests with exceptional ocean views from your balcony or patio. First-rate accommodations, unmatched service, pristine grounds, and a relaxing private beach await you.

BREATHLESS RESORT & SPA

Punta Cana, Dominican Republic

Breathless Punta Cana is perfectly situated on a palm-studded beach with suites that provide luxurious amenities and a whirlpool on every guest's private, furnished terrace or balcony. Daytime activities and live nightly entertainment provide excitement for all. Breathless Resort & Spa offers an adult-only ocean-front vacation experience in a spectacular beachfront setting.

GRAND CAYMAN, CAYMAN ISLANDS

7-Night Accommodations at the London House

HOW TO QUALIFY

Individual customers with a net seed order amount of \$200,000 of Beck's corn and soybeans AND who are a President's Club member for 2022 may qualify for ONE free Grand Cayman trip (one trip is for two people).

Individual customers with a net seed order amount between \$250,000 and \$499,999 of Beck's corn and soybeans may qualify for ONE free Grand Cayman trip (one trip is for two people).

Individual customers with a net seed order amount of \$500,000 or more of Beck's corn and soybeans may qualify for TWO free Grand Cayman trips (one trip is for two people). The Dominican Republic trip and the Grand Cayman trip may be substituted as one or both trips.

Example: One trip to Grand Cayman and one trip to the Dominican Republic, or both to the same location.

BOOKING A TRIP

Contact: Brittany Street, Tara Beck, or Gina Sloderbeck at 800.937.2325

Trip Dates: Trips typically run from Monday to Monday, Tuesday to Tuesday, Friday to Friday, or Saturday to Saturday between November 2021 and April 2022.

An IRS form 1099 will be issued to qualified participants for the value of this trip in the amount of \$1,700 per person.

COMMITMENT REWARDS

At Beck's, we're driven by our desire to help farmers succeed and add tangible value to their farms. One way we continue to do that is through Commitment Rewards. By taking advantage of this value-added, solution-based program, farmers can free up working capital while adding new equipment to their operation.

ONE-YEAR COMMITMENT

Agree to purchase a minimum amount of Beck's seed* for the 2022 planting season and pay the required amount for the selected reward item(s).

THREE-YEAR COMMITMENT

Agree to purchase a minimum amount of Beck's seed* for the 2022, 2023, and 2024 planting seasons and pay the required amount for the selected reward item(s).

COMMITTED CUSTOMER DISCOUNT

Customers will receive a \$20 discount on every unit of Beck's corn and a \$5 discount on every unit of Beck's soybeans when orders are placed by January 15, 2022.

EARLY SIGN AND SELECT PROGRAM

Customers that sign a new multi-year agreement prior to September 15, 2021 will earn 5 additional Commitment Reward points over and above their already earned point value. Agreements must be received and all items selected prior to the deadline to qualify.

*As of August 1, 2021, all Beck's seed products purchased qualify towards your Commitment Reward level.

B CUSTOMIZE YOUR OWN CASE IH®

The 2022 Commitment Rewards Program offers you the option to contact your local Case IH dealer and configure the Model Year 2021 or 2022 tractor, sprayer, combine, or planter of your choice with the specifications you desire.

After you have configured the machine, send the quote confirmation with the machine total list price back to Beck's. List prices must come through an authorized Case IH dealer's equipment ordering system to be valid.

Based on the machine you have configured, Beck's will then determine the per year lease payment cost based on commitment level. This offer only applies to Model Year 2021 or 2022 machinery at Model Year 2021 or 2022 list prices.**

Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS Product Launch Stewardship Guidance and in compliance with the Pioneer policies regarding stewardship of those products. Crops and materials containing biotech traits may only be exported to or used, processed, or sold in jurisdictions where all necessary regulatory approvals have been granted for those crops and materials. It is a violation of national and international laws to move materials containing biotech traits across borders into jurisdictions where their import is not permitted. Growers should discuss these issues with their purchaser or grain handler to confirm the purchaser or handler's position on products being purchased. Excellence Through Stewardship® is a registered trademark of the Biotechnology Industry Organization.

 Product performance in water-limited environments is variable and depends on many factors such as the severity and timing of moisture deficiency, heat stress, soil type, management practices and environmental stress as well as disease and pest pressures. All hybrids may exhibit reduced yield under water and heat stress. Individual results may vary.

Always follow grain marketing, stewardship practices and pesticide label directions. Varieties with the Glyphosate Tolerant trait (including those designated by the letter "R" in the product number) contain genes that confer tolerance to glyphosate herbicides. Glyphosate herbicides will kill crops that are not tolerant to glyphosate.

AM - Optimum® AcreMax® Insect Protection system with YGCB, HX1, LL, RR2. Contains a single-bag integrated refuge solution for above-ground insects. In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax products. **AMXT** (Optimum® AcreMax® XTreme®) - Contains a single-bag integrated refuge solution for above- and below-ground insects. The major component contains the Agrisure® RW trait, a Bt trait, and the Herculex® XTRA genes. In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax XTreme products. Roundup Ready® is a registered trademark used under license from Monsanto Company. Liberty®, LibertyLink® and the Water Droplet Design are trademarks of BASF.® Herculex and the HX logo are registered trademarks of Dow AgroSciences, LLC. Agrisure® and Agrisure Viptera® are trademarks of, and used under license from, a Syngenta Group Company. Agrisure® technology incorporated into these seeds is commercialized under a license from Syngenta Crop Protection AG. **Q** - Qrome® products are approved for cultivation in the U.S. and Canada. They have also received approval in a number of importing countries, most recently China. For additional information about the status of regulatory authorizations, visit <http://www.biotradestatus.com/>. **PWRA** - PowerCore® multi-event technology developed by Corteva Agriscience and Monsanto.® PowerCore is a registered trademark of Monsanto Technology LLC. Always follow IRM, grain marketing and all other stewardship practices and pesticide label directions. B.t. products may not yet be registered in all states. Check with your seed representative for the registration status in your state. **AML** - Optimum® AcreMax® Leptra® products with AVBL, YGCB, HX1, LL, RR2. Contains a single-bag integrated refuge solution for above-ground insects. In EPA-designated cotton growing countries, a 20% separate corn borer refuge must be planted with Optimum AcreMax Leptra products.

Varieties with the STS® gene (STS) are tolerant to certain SU (sulfonylurea) herbicides. This technology allows post-emergent applications of Synchrony® XP and DuPont™ Classic® herbicides without crop injury or stress (see herbicide product labels). NOTE: A soybean variety with a herbicide tolerant trait does not confer tolerance to all herbicides. Spraying herbicides not labeled for a specific soybean variety will result in severe plant injury or plant death. Always read and follow herbicide label directions and precautions for use. Optimum® brand products available through the XL® brand.®XL, Optimum, AcreMax, Qrome, Leptra, AQUAmax and STS are registered trademarks of Corteva Agriscience and its affiliated companies. XL® brand seed is distributed by Beck's Superior Hybrids, Inc.

Bayer Company is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. This product has been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship. B.t. products may not yet be registered in all states. Check with your representative for the registration status in your state.

Before opening a bag of seed, be sure to read and understand the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed set forth in the technology agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.

IMPORTANT IRM INFORMATION: RIB Complete® corn blend products do not require the planting of a structured refuge except in the Cotton-Growing Area where corn earworm is a significant pest. See the IRM/Grower Guide for additional information. Always read and follow IRM requirements. DroughtGard® Hybrids with RIB Complete® corn blend the refuge seed may not always contain DroughtGard® Hybrids

trait. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology. Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs. XtendFlex®, Roundup Ready 2 Xtend®, RIB Complete and Design®, RIB Complete®, Roundup Ready 2 Technology and Design®, Roundup Ready®, DroughtGard®, Trecepta®, Trecepta®, SmartStax®, and VT Double PRO® are trademarks of Bayer Group. LibertyLink® and the Water Droplet Design® are registered trademarks of BASF Corporation. Herculex® is a registered trademark of Dow AgroSciences LLC. Insect control technology provided by Vip3A is utilized under license from Syngenta Crop Protection AG. Agrisure Viptera® is a registered trademark of a Syngenta group company. Respect the Refuge and Corn Design® and Respect the Refuge® are registered trademarks of National Corn Growers Association.

Agrisure®, Agrisure Artesian®, Artesian™, Agrisure Duracade®, Agrisure Viptera®, and E-Z Refuge® are trademarks of a Syngenta Group Company. **IMPORTANT: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.** More information about Agrisure Duracade® is available at <http://www.biotradestatus.com/>. Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, postemergent weed control of Liberty® herbicide for optimum yield and excellent weed control. Agrisure® Technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF. Herculex® Technology incorporated into these seeds is commercialized under license from Dow AgroSciences, LLC. HERCULEX® and the HERCULEX Shield are trademarks of Dow AgroSciences, LLC.

Seeds containing the LibertyLink® trait may be protected under one or more U.S. patents and may be planted only to produce one (1) commercial crop in a single season, and only after signing a BASF Grower Technology Agreement. It is illegal to save seeds containing the LibertyLink trait for use as planting seed or for transfer to others for use as planting seed. LibertyLink® GT27™ soybeans offer triple stack tolerance to Liberty, glyphosate, and, in select counties specified on the label, the first HPPD based herbicide for soybeans—Alite™ 27. Other HPPD herbicides not labeled for use with LibertyLink GT27 or isoxaflutole-resistant soybeans may cause significant crop injury. Alite 27 herbicide is only available for use in labeled counties. Always read and follow label directions. Alite 27 is a restricted use herbicide. Alite, Liberty, and LibertyLink are registered trademarks of BASF. GT27 is a trademark of M.S. Technologies, L.L.C. and BASF. MS Technologies is a trademark of M.S. Technologies, L.L.C. ©2020 BASF Corporation / M.S. Technologies, L.L.C. All Rights Reserved. APN 20-INT-0014 Liberty®, LibertyLink®, the Water Droplet logo, Poncho®, VOTIVO® and TWO.O® are registered trademarks and Alite™ is a trademark of BASF. GT27™ is a trademark of M.S. Technologies, L.L.C. MS Technologies is a trademark of M.S. Technologies, L.L.C. ©2020 BASF Corporation. All Rights Reserved.

Seeds containing the Enlist, Herculex and PowerCore traits are protected under numerous US patents. Seeds containing patented traits can only be used to plant a single commercial crop and cannot be saved or replanted. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements detailed therein (www.corteva.us/Resources/trait-stewardship.html). To plant Enlist, Herculex and PowerCore seed, you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed. Always read and follow herbicide label directions prior to use: Enlist® products contain the Enlist trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist® crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are

not authorized for use in conjunction with Enlist products. Enlist E3® soybean seeds containing the Enlist® trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3® soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist® Soybean Product Use Guide. U.S. patents for Dow AgroSciences technologies can be found at the following webpage: www.corteva.us/Resources/trait-stewardship.html. Dow AgroSciences is a member of Excellence Through Stewardship® (ETS). Dow AgroSciences products are commercialized in accordance with ETS product launch stewardship guidance and Dow AgroSciences Product Launch Stewardship Policy. No crop or material produced from this product can be exported to, used, processed or sold across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. For further information about your crop or grain marketing options, contact DAS at 877-4-TRAITS (877-487-2487). Information regarding the regulatory and market status of agricultural biotechnology products can be found at: www.biotradestatus.com. The transgenic soybeans event in Enlist E3® soybeans is jointly developed and owned by Dow AgroSciences LLC and M.S. Technologies, L.L.C. ®™ Enlist, Enlist E3, the Enlist E3 logo, and Colex-D are trademarks of The Dow Chemical Company ("Dow") or an affiliated company of Dow.

 In the following states, purchase and use of HarvXtra® Alfalfa with Roundup Ready® Technology is subject to a Seed and Feed Use Agreement, requiring that products of this technology can only be used on farm or otherwise be used in the United States: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. In addition, due to the unique cropping practices do not plant HarvXtra® Alfalfa with Roundup Ready® Technology in Imperial County, California, pending import approval and until Forage Genetics International, LLC (FGI) grants express permission for such planting. Forage Genetics International, LLC ("FGI") is a member of Excellence Through Stewardship® (ETS). FGI products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with FGI's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. HarvXtra® Alfalfa with Roundup Ready® Technology and Roundup Ready® Alfalfa have pending import approvals. GROWERS MUST DIRECT ANY PRODUCT PRODUCED FROM HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY SEED OR CROPS (INCLUDING HAY AND HAY PRODUCTS) ONLY TO UNITED STATES DOMESTIC USE. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Growers should refer to <http://www.biotradestatus.com/> for any updated information on import country approvals. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate. Glyphosate herbicides will kill crops that are not tolerant to glyphosate. Roundup Ready® is a registered trademark of Bayer Group, used under license by Forage Genetics International, LLC. HarvXtra® is a registered trademark of Forage Genetics International, LLC. HarvXtra® Alfalfa with Roundup Ready® Technology is enabled with Technology from The Samuel Roberts Noble Foundation, Inc.

Escalate®, the Escalate logo, Nemasect®, FARMserver®, Practical Farm Research (PFR)®, PFR Proven™, Freedom Plus®, Power in the PRE™, Bio-Xtra™, and Farmers at Heart™ are trademarks of Beck's Superior Hybrids, Inc.

THINK BEFORE YOU BIN RUN

Verification Required The last patent on the original Roundup Ready® soybean trait expired a few years ago and U.S. farmers may legally plant saved seed from some varieties of soybean containing the Roundup Ready® soybean trait. However, it is important that you check with your seed supplier to determine if a specific Roundup Ready® soybean variety is covered by other intellectual property rights, and if so, the policy for saving seed of that variety.

Higher Seeding Rate A higher seeding rate may be required for bin-run Roundup Ready® soybeans compared to new branded seed.

Yield Loss Roundup Ready 2 Yield® soybean varieties and Roundup Ready 2 Xtend® soybean varieties typically have a higher yield opportunity than Roundup Ready® soybean varieties*.

Cleanout Loss Loss of seed and/or shrink occurs during the seed cleaning and handling processes for bin-run seed.

Seed Treatment Costs Treating your seed will add costs—both the cost of the treatment and the application of that treatment.

Lost Income Every bushel of saved seed you plant is a bushel you're not selling as commodity grain.

Increased Seed Management If you plan to save and bin-run Roundup Ready® soybeans for planting, you will have to manage your harvest operations and grain storage so that the seed isn't co-mingled with other seed that's covered by intellectual property rights.

High Value of New Branded Seed

Latest Technology

- // High-yielding soybean technologies
- // Better variety options
- // Leading seed treatment options

Customer Service

- // Dealer agronomic support before and after the sale
- // Replant policy support
- // Convenient packaging and delivery

Reliable Germination and Quality

- // Rigorously tested and meets U.S. Federal Seed Act requirements
- // Free of seed-borne diseases
- // Properly stored and conditioned
